## Key Performance Indicators

|                  |               |
|------------------|---------------|
| Total Revenue    | \$515,704,476 |
| Total Profit     | \$284,162,740 |
| Profit Margin    | 55.1%         |
| Total Orders     | 5,000         |
| Avg Order Value  | \$103,141     |
| Best Region      | North         |
| Worst Region     | West          |
| Top Therapy Area | Oncology      |
| Top Drug         | Avastin       |
| Monthly Growth   | 15.1%         |
| Quarterly Growth | 19.0%         |

## Revenue Trend

## Predictive Forecast

Next month's revenue is forecast at **\$16,697,326** (model RMSE: \$1,869,316, R<sup>2</sup>: 0.248).

## Business Risks & Recommendations

### [High] Margin Leakage

Finding: North region has a discount rate of 18.0%, vs. 6.6% average across other regions.

Recommendation: Reduce discount campaigns in North by 5-8% and audit rep-level discount approvals to recover margin.

### [High] Inventory Risk

Finding: Average inventory for Ozempic is 23 units, below the 50-unit safety threshold.

Recommendation: Increase replenishment priority for Ozempic to avoid stockouts in high-demand regions.

### [Medium] Underperforming Region

Finding: West contributes only 15.5% of total revenue, the lowest among all regions.

Recommendation: Evaluate root cause in West — sales rep coverage, hospital contracts, or marketing spend allocation.

### [Medium] Underperforming Region

Finding: Central contributes only 16.2% of total revenue, the lowest among all regions.

Recommendation: Evaluate root cause in Central — sales rep coverage, hospital contracts, or marketing spend allocation.

### [Low] Underperforming Therapy Area

Finding: Vaccines contributes only 10.2% of total revenue.

Recommendation: Assess whether Vaccines warrants increased marketing investment or is a strategic candidate for portfolio deprioritization.

### [Low] Underperforming Therapy Area

Finding: Neurology contributes only 15.9% of total revenue.

Recommendation: Assess whether Neurology warrants increased marketing investment or is a strategic candidate for portfolio deprioritization.

## AI Business Consultant Summary

### \*\*Executive Summary\*\*

Our top ten products generate approximately \$383M in aggregate revenue, with portfolio performance heavily concentrated in oncology and cardiovascular therapies, which capture seven of the top ten positions and drive our upper performance tier (\$37M–\$48M range). We observe a clear revenue bifurcation: a mature, high-yield top tier led by Avastin and Opdivo, and a distinct secondary cluster around the \$28M threshold comprised of GLP-1/cardiometabolic assets (Ozempic, Trulicity) and Vyepti. Overall top-line sustainability depends on protecting the high-margin oncology core while bridging the ~\$10M revenue gap between our mid-tier growth assets and top-tier anchors.

### \*\*Strategic Recommendations\*\*

\* \*\*Defend the ~\$175M Oncology Core:\*\* Reallocate targeted field force resources to protect volume across top oncology assets (Avastin, Opdivo, Keytruda, Herceptin). Implement loss-of-exclusivity and biosimilar defense playbooks for legacy biologics like Avastin (\$47.8M) to preserve cash flow that funds expansion elsewhere in the portfolio.

\* \*\*Accelerate GLP-1 and Specialty Scale-Up:\*\* Address the ~\$10M revenue step-down between Eliquis (\$37.6M) and Ozempic (\$28.8M) by increasing promotional frequency and key account management for Ozempic, Trulicity, and Vyepti. Moving these three products from the sub-\$29M tier into the \$35M+ bracket represents our highest-ROI path to near-term portfolio expansion.

\* \*\*Optimize Cardiovascular Cross-Selling:\*\* Entresto, Brilinta, and Eliquis collectively deliver over \$121M in sales; realign sales territory coverage and incentive structures to cross-lever physician relationships in cardiology, maximizing pull-through for Entresto (\$43.9M) while defending Eliquis against class competition.
